AnfieldVoice

Intelligent Visitor & Communication Management for
Residential Estates

Secure • Efficient • Built for Estates

Prepared for: Body Corporate & Estate Management

Date: July 2026 | **Confidential**

Red Cape Technologies (Pty) Ltd

Reg: 2022/762895/07

The Problem

Every day, the same domestic workers, school transport, deliveries, and visitors queue at the gate. Security treats every arrival as if they've never been before. Residents get calls about people they approved yesterday. No one has a complete record of who entered or when.

15-25h

Security phone time
per week

60-70%

Security on the
phone, not the gate

50-80

Verification calls to
residents daily

8-15

Vehicles queued at
morning peak

The Solution — AnfieldVoice

AnfieldVoice replaces the intercom, visitor logbook, delivery register, and resident phone directory with a single platform. Every arrival, every call, every access decision is recorded and searchable.

What you get

PIN-Based Visitor Ticketing

Residents generate one-time or recurring PINs for every visitor. No PIN, no entry.

★ Recurring Visitor Profiles

Save domestic workers, school transport, gardeners. Daily authorisation in 5 seconds.

Delivery Management

Pre-approve, redirect, or deny deliveries. No more "we have a package" calls.

Security Dashboard

Real-time view of all active tickets. Admit with one click. Complete audit trail.

Resident App

Create tickets, call security, manage visitors, receive delivery alerts. iOS + Android.

Administration Portal

Resident management, visitor policies, analytics, audit export, estate announcements.

What changes

Before:

- Every visitor processed from scratch
- Handwritten gate logs or nothing
- Residents interrupted all day
- Deliveries = phone calls

After AnfieldVoice:

- Recurring visitors: 10-15 seconds at gate
- Complete searchable audit trail
- 70% fewer resident verification calls
- Every delivery logged and tracked

Security — Six Layers of Verification

No single point of failure. Every layer must be satisfied before anyone enters the estate.

1 Resident Authorisation

Every visit begins with an explicit resident action. No PIN, no entry. No exceptions.

2 Time-Bound PIN

Each PIN is valid for today only. Expired PINs are rejected automatically. Yesterday's PIN won't work today.

3 Ticket Retrieval

A PIN retrieves exactly one ticket, for one visitor, on one day. Revoked tickets are immediately denied.

4 Officer Verification

The security officer sees the full ticket and visually confirms the visitor matches. Every admission is attributed.

5 Exception Handling

If anything doesn't match, the officer calls the resident directly from the dashboard. No admission without resolution.

6 Complete Audit Trail

Every decision is logged immutably — who created the ticket, when it was used, who admitted the visitor, and any exceptions.

Data Protection

- All data encrypted in transit and at rest
- PINs are one-way hashed — never stored in plaintext
- POPIA-compliant with configurable retention policies
- All administrative access is logged and auditable

Access Control — Who Can Do What

Roles are additive. A person can be a resident AND a property admin. But a non-resident property admin never receives resident-only privileges like gate calls or visitor PINs.

Function	Resident	Property Admin (Lives Here)	Property Admin (Remote)	Body Corp
Receive gate calls	✓	✓	✗	✓
Generate visitor PINs	✓	✓	✗	✓
Add / remove tenants	✗	✓	✓	✓
Activate / suspend residents	✗	✓	✓	✓
View apartment activity	Limited	✓	✓	✓
Estate administration	✗	✗	✗	✓

How It Works — Three Visitor Scenarios

1. Standard Visitor

Resident creates ticket → System generates one-day PIN → Visitor enters PIN at gate → Security verifies and admits → All logged. Total time: ~20-30 seconds.

2. Recurring Visitor (Daily — Domestic Worker, School Transport)

Resident taps saved profile → "Generate Today's PIN" (5 seconds) → Visitor enters PIN → Dashboard shows "Verified Profile" badge → Quick admit. Total time: ~10-15 seconds. No phone call needed.

3. Unexpected Visitor

Visitor has no PIN → Terminal calls resident via app → Resident answers and issues PIN → Standard admission. If resident doesn't answer, visitor is not admitted. Event is logged.

4. Delivery Management

Driver arrives → Resident pre-approval shown on dashboard (Accept / Hold at Gate / Redirect) → Delivery logged with driver details, time, and resolution. No phone calls.

Platform Components

Resident Mobile App

- Create visitor tickets and generate PINs
- Manage recurring visitor profiles
- Receive delivery notifications
- One-touch call to security
- Resident directory (opt-in)

Security Dashboard

- Real-time ticket queue with status indicators
- One-click admit/deny controls
- Recurring visitor badges for quick ID
- One-click resident calling from any ticket
- Searchable audit log
- Multi-language (English, Afrikaans, Zulu)

Visitor Terminal

- Weatherproof touchscreen at the gate
- PIN entry and resident search
- Direct call to resident
- Customisable with estate rules

Administration Portal

- Resident account management
- Visitor policy configuration
- Analytics and reporting
- Audit export (PDF/CSV)
- Estate-wide announcements

What You Get

After deposit is paid, your system is installed and operational within **2-3 weeks**:

Hardware Included

- **1x Server** — on-site, pre-configured, ready to run
- **3x Tablets** — for security dashboards at the gate
- **2x Number Pads** — weatherproof, outdoor rated

Services Included

- **Full installation** — on-site setup and configuration
- **Security staff training** — hands-on dashboard training
- **Resident onboarding** — app setup support and materials
- **Go-live support** — on-site during first week of operation

Key Benefits

- Gate processing time reduced by 60-80% for recurring visitors
- Resident verification calls reduced by ~70%
- Complete audit trail of every access event
- Morning peak queue reduced by ~60%
- Security officers focus on security, not phone duty
- POPIA-compliant resident data handling
- Custom-branded app for your estate
- SA-based support and local understanding

About Red Cape Technologies

Red Cape Technologies builds practical security and communication systems designed from the ground up for South African residential estates. No generic products adapted for estates — everything we build is purpose-built for estate living.
